Lab - Basic Analysis using Pivot Tables

Data:

Use the provided files - *sales.xlsx*, *product_hierarchy.xlsx*, *store_cities.xlsx*, *store_names.xlsx*, *city_names.xlsx*, and *product_names.xlsx*.

Hold the CTRL key while you click each file to download it:

sales.xlsx

product_hierarchy.xlsx

store_cities.xlsx

store_names.xlsx

city_names.xlsx

product_names.xlsx

Software: MS Excel

Duration: 1hr

Tasks:

1. Data Inspection

- Review the Cleaned Data
  - Begin by revisiting each Excel file from Lesson 1. Pay close attention to identifying primary keys, foreign keys, and the interrelations among tables to grasp how they can be interconnected in pivot table analyses

2. Sales Data Analysis

- Use Files: Use the *sales.xlsx* and *store_names.xlsx* files
- Create Pivot Table: Create a pivot table to compute metrics by store, including:
  - Total Sales
  - Total Stock
  - Total Revenue
  - Average Sales

3. Sales by City Analysis

- Use Files: Use data from *sales.xlsx*, *store_cities.xlsx*, and *city_names.xlsx*
- Create Pivot Table: Create a pivot table to analyze city-based metrics:
  - Total Sales
  - Total Revenue
  - Average Sales

4. Product Performance Analysis

- Use Files: Use *product_hierarchy.xlsx*, and *product_names.xlsx*
- Create Pivot Table: Create a pivot table to reveal product-related metrics:
  - Total Sales
  - Total Revenue
  - Average Sales

5. Take Screenshots

- Take a screenshot after each task, as you'll be required to add them to your final presentation.

Note

Through the structured use of pivot tables in Excel, you can transform your cleaned data sets into insightful analyses. By evaluating sales performance across different dimensions—such as by store, city, or product—you can uncover valuable insights that inform business strategies and operational improvements.

Congratulations! You have completed this lab and are ready for the next topic.
