Lab: Building Hierarchies in Tableau

Author(s): Kirk Mitchell, Bill Jacobs

In this lab, you will learn how to use and to take advantage of Data Hierarchies in Tableau.

Required Software

Tableau Desktop 2019.1 or higher. We recommend downloading **Tableau Desktop Public Edition** software. You may also use the **Tableau Public Online platform**. For current dates, please see the Course Calendar. Note that the course may only be supported for the current version.

Prerequisites

Students should have completed the Tableau Fundamentals course, or can sign up for an account on the cloud-based version here.

Data Set

We will use Global Indicators data set, which **WHO_lightings_USA_Canada.xlsx**, and **World-Indicators-Data.xlsx** in the **World Indicators Data** set. Download the Tableau Sample Data Set here:

Unzip the File, and you will find the downloaded data set in the following files:

World-Indicators-Data.xlsx
WHO_lightings_USA_Canada.xlsx
Sample-Superstore.xlsx

Objectives

This Exercise will be 100% lab, and you will be asked to make calculations and build hierarchies in Tableau.

- Exercise 1: Connect to Data
- Exercise 2: Build Hierarchies
- Exercise 3: Build Hierarchies

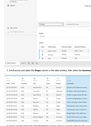
Exercise 1: Connect to Data Sources

In this exercise, in Tableau Public, you will connect to a local file and to the World Indicators data set.

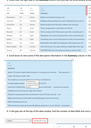
Connect to a local file

1. Navigate to the folder where you downloaded the data set, to, then select **WHO_lightings_USA_Canada.xlsx**, and click **Open**.

2. Drag and drop your table into **Drop sheets here** area. Tableau will ask you to **Update Data Source**, click on **Update**.



3. Scroll down and select the **Data Source** column in the data structure. Then select the **Synonyms** column.



4. Scroll down to the **Synonyms** column in the **Synonyms** column in the data table.

5. Click on the **Synonyms** field and type the following synonyms:

```
Data Source
Data Source Order
Data Source Name
Data Source Type
Data Source Connection
Data Source Connection Type
Data Source Connection Server
Data Source Connection Port
Data Source Connection Database
Data Source Connection Schema
Data Source Connection Table
Data Source Connection Table Type
Data Source Connection Table Schema
Data Source Connection Table Catalog
Data Source Connection Table Alias
Data Source Connection Table Alias Type
Data Source Connection Table Alias Schema
Data Source Connection Table Alias Catalog
```

6. Click on the **Data Source** field, and drag it to the right to Sheet 1 area.

7. Click on the **Data Source** field, and drag it to the right to Sheet 1 area.

8. Click on the **Data Source** field, and drag it to the right to Sheet 1 area.

Connect to the World Indicators Data set

1. Navigate to the folder where you downloaded the data set, to, then select **World-Indicators-Data.xlsx**, and click **Open**.

2. Click on the **Data Source** field, and drag it to the right to Sheet 1 area.

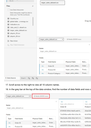
3. Click on the **Data Source** field, and drag it to the right to Sheet 1 area.

Exercise 2: Build Hierarchies

In this Exercise, you will use the World Indicators Data set to demonstrate how to set up hierarchies in Tableau.

Create a Geo Hierarchy

1. Click on **Sheet 1**.



2. Navigate to the folder where you downloaded the data set, to, then select **World-Indicators-Data.xlsx**, and click **Open**.

3. Click on the **World Indicators Data**.

4. Click on **Sheet 1**.

5. Click on the **Geography** field.

6. Click on the **Geography Drill Down** icon.

7. Click on the **Geography Drill Down** icon.

8. Click on the **Geography Drill Down** icon.

Exercise 3: Build Hierarchies

In this Exercise, you will use the World Indicators Data set to demonstrate how to set up hierarchies in Tableau.

Create a Geo Hierarchy

1. Click on **Sheet 1**.

2. Navigate to the folder where you downloaded the data set, to, then select **World-Indicators-Data.xlsx**, and click **Open**.

3. Click on **World Indicators Data**.

4. Click on **Sheet 1**.

5. Click on the **Region** field.

6. Click on the **Region** field, and drag it to the right to Sheet 1 area.

7. Click on the **Region** field, and drag it to the right to Sheet 1 area.

8. Click on the **Region** field, and drag it to the right to Sheet 1 area.

9. Click on the **Region** field, and drag it to the right to Sheet 1 area.

10. Click on the **Region** field, and drag it to the right to Sheet 1 area.

11. Click on the **Region** field, and drag it to the right to Sheet 1 area.

12. Click on the **Region** field, and drag it to the right to Sheet 1 area.

13. Click on the **Region** field, and drag it to the right to Sheet 1 area.

14. Click on the **Region** field, and drag it to the right to Sheet 1 area.

15. Click on the **Region** field, and drag it to the right to Sheet 1 area.

16. Click on the **Region** field, and drag it to the right to Sheet 1 area.

17. Click on the **Region** field, and drag it to the right to Sheet 1 area.

18. Click on the **Region** field, and drag it to the right to Sheet 1 area.

19. Click on the **Region** field, and drag it to the right to Sheet 1 area.

20. Click on the **Region** field, and drag it to the right to Sheet 1 area.

21. Click on the **Region** field, and drag it to the right to Sheet 1 area.

22. Click on the **Region** field, and drag it to the right to Sheet 1 area.

23. Click on the **Region** field, and drag it to the right to Sheet 1 area.

24. Click on the **Region** field, and drag it to the right to Sheet 1 area.

25. Click on the **Region** field, and drag it to the right to Sheet 1 area.

26. Click on the **Region** field, and drag it to the right to Sheet 1 area.

27. Click on the **Region** field, and drag it to the right to Sheet 1 area.

28. Click on the **Region** field, and drag it to the right to Sheet 1 area.

29. Click on the **Region** field, and drag it to the right to Sheet 1 area.
