# Lab: Configuring Dashboard Actions

Estimated time: about 90 minutes

In this lab, you will learn how to configure dashboard actions in Tableau to increase the interactivity of your dashboards.

## Required Software

You can complete this lab using the free downloadable **Tableau Desktop (Public Edition)** desktop software. You may also use the **Tableau Public online platform**, but some tools may not work exactly the same way as they do in the supported Desktop version.

## Prerequisites

You need a free Tableau Public account for the lab. If you haven't already done so, you can sign up for an account using the link here.

## Data Set

This lab uses a simple data set called **World Indicators Data.xls** to showcase the Tableau features used in these lab exercises.

Download the ZIP file, extract, and you will find the following file:

World Indicators Data.xls

## Objectives

After completing this lab, you will be able to: How to configure dashboard actions in Tableau. This feature can help make your dashboards more interactive and intuitive for end-users.

1. Configure filter actions
2. Configure dashboard actions

## Exercise: Configuring dashboard actions

In this exercise, in Tableau Public, you will configure several different types of dashboard actions to make your dashboard more interactive and intuitive for end-users. Follow the steps below:

1. Open Tableau Public and connect to the data set, or open **World Indicators Data.xlsx** and click **Open**.
2. Click **Sheet 1** to access the data.
3. Drag **Country/Region** into **Rows** and **Year** into **Columns** to create a line chart.
4. Drag **Gross Domestic Product (GDP)** into **Size** and **Life Expectancy** into **Color**.

5. Drag **Region** into **Filters**.
6. Drag **Country/Region** into **Rows** to create a bar chart.

7. Drag **Life Expectancy** into **Rows** to create a line chart.

8. Drag **Gross Domestic Product (GDP)** into **Rows** and **Life Expectancy** into **Columns**.

9. Drag **Country/Region** into the **Detail** section of the **Marks** card.
10. Drag **Country/Region** into **Rows** and **Year** into **Columns**.
11. Drag **Gross Domestic Product (GDP)** into **Color** and **Life Expectancy** into **Size**.
12. Double click **Sheet 1** and rename it to **Bar Chart**.
13. Drag **Country/Region** into the **Detail** section of the **Marks** card.
14. Drag **Region** into **Rows**.
15. Drag **Life Expectancy** into **Columns**.
16. Drag **Region** into **Color**.
17. Double click **Sheet 1** and rename it to **Map Visualization**, and press Enter.

18. At the bottom of the page, click the **New Dashboard** icon.
19. In the left pane, click **Map Visualization** and **Bar Chart** from the dashboard workspace and position them side by side.
20. In the left pane, click **Size** and in the first drop down, select **Automatic** to make your dashboard look like:
