SkillUp

Hands-on lab: Dashboards with AI

Estimated time: 30 minutes

Learning objectives

After completing this lab, you will be able to:

- Generate basic visualizations using an AI powered tool's search driven analytics.
- Create an interactive dashboard using an AI powered tool.

Introduction

A Business Intelligence (BI) analyst is given a task to explore sales data and create interactive dashboards for the stakeholders.

In this lab, you'll create dynamic and interactive dashboards using ThoughtSpot, an AI powered analytics and business intelligence tool. Participants will learn to utilize ThoughtSpot's search driven analytics, AI powered insights, and interactive features to analyze and visualize data effectively.

Data source

The data set used in this lab has been synthetically generated. Download the sales_data.zip data set. (To download the given data set in this lab, right-click on the given hyperlink and select "Save link as".)

Software used for this lab

You'll be using an AI based self-service analytics platform, "ThoughtSpot" to explore data and create interactive dashboards.

Before you begin

To access the ThoughtSpot platform, sign up for a free trial with the ThoughtSpot platform. ThoughtSpot offers a 14 day free trial.

To sign up for a free trial, go to https://www.thoughtspot.com, click the **Free Trial button** in the top right corner.

Sign up with your Email account. You'll receive an activation email. On clicking the Activate My Account button in the email, you'll be asked to set your password. After setting your password, you may proceed to use the platform.

Task 1: Connect to the data source

Keep the sales_data.csv data set handy.

This is the ThoughtSpot home page. To connect to the data source, select the **Data** tab.
