Project Overview:

Put your knowledge and skills to the test in this hands-on project module. Apply everything you've learned throughout the course to complete a data visualization project from start to finish. Connect to a CSV file and import; create interactive visualizations, insightful dashboards, and stories while adhering to best data visualization, storytelling, and dashboard design practices.

Project Scenario:

You have been employed as a BI/data analyst by a Healthcare consultancy firm that analyzes the state of global happiness annually. The World Happiness Report offers valuable insights into factors influencing happiness across countries. The firm wants you to produce a report to determine whether demographic, regional, and economic characteristics lead to a better life.

You searched for a data set that can analyze the happiness index globally. You found the World Happiness Report, which includes data sets consisting of key metrics related to global happiness and well-being, such as:

- Country names
- Regions
- Happiness scores
- GDP per capita
- Social support
- Healthy life expectancy
- Freedom to make life choices
- Generosity
- Perceptions of corruption

These metrics offer insights into the happiness and socio-economic conditions of various countries and regions, making them a valuable resource for analyzing and understanding well-being on a global scale.

You recently completed a course on Tableau from IBM. You thought of putting your newly acquired knowledge and skills to the test by completing this world happiness comprehensive data visualization project from start to finish. The project aims to demonstrate your proficiency in Tableau, showcasing your ability to connect to data sources, import and clean data, and create interactive visualizations, insightful stories, and interactive dashboards. It is crucial to adhere to best practices in data visualization, storytelling, and dashboard design throughout the project. You can share your project through the shareable link to your dashboard to showcase your expertise on Tableau Public with your peers.

About the Data Set:

The World Happiness Report contains survey data concerned with the general happiness levels of people across the world. The report analyzes and summarizes happiness levels in the world today and indicates how this recent science defines individual and national differences in levels of happiness.

This is a public data set available on the Kaggle website as World Happiness Report under the CC0: Public Domain license. The primary data set was retrieved from the World Happiness Report.

For this final project, you will work on the **data for 2015-2023, which has been slightly modified** for this guided practice project.

Hold the CTRL key while you click to download it from here

Attributes of this data set have been explained below:

Column	Description
country	The name of the country
region	The geographic region or continent
happiness_score	A measure reflecting overall happiness
gdp_per_capita	The extent to which GDP contributes to the calculation of the Happiness Score
social_support	A metric measuring social support
healthy_life_expectancy	The extent to which life expectancy contributes to the calculation of the Happiness Score
freedom_to_make_life_choices	The extent to which freedom contributes to the calculation of the Happiness Score
generosity	The extent to which generosity contributes to the calculation of the Happiness Score
year	The year of data collection (2015- 2023)

Tasks in the project:

Task 1: Happiness status overview

1. Find the average happiness score for each region
2. Identify the 10 most happy countries over the years
3. Identify the 10 least happy countries over the years
4. Create a dashboard titled "Happiness Status Overview (2015-2023)"

Task 2: Effect of GDP per capita on happiness score

1. Identify the average happiness score for the 10 most happy countries
2. Find the average GDP per capita trend for the 10 most happy countries over the years
3. Identify the effect of GDP per capita on the happiness score for each year for the 10 most happy countries
4. Create a dashboard titled "Effect of GDP per Capita on Happiness Score (Top 10 Most Happy Countries)"

Task 3: Effect of other factors on happiness score for the 10 happiest countries

1. Identify the happiness score for the 10 most happy countries for all the years
2. Find the freedom and social support figures for the 10 most happy countries over the years
3. Identify the effect of generosity and healthy life expectancy for each year for the 10 most happy countries
4. Create a dashboard titled "Effect of Freedom, Social Support, Generosity and Healthy Life Expectancy (Most Happy Countries)"

Task 4: Effect of other factors on happiness score for the 10 least happy countries

1. Identify the happiness score for the 10 least happy countries for all the years
2. Find the freedom and social support figures for the bottom 10 least happy countries over the years
3. Identify the effect of generosity and healthy life expectancy for each year for the bottom 10 least happy countries
4. Create a dashboard titled "Effect of Freedom, Social Support, Generosity and Healthy Life Expectancy (Least Happy Countries)"

Task 5: Create a story and share your final project workbook

1. Include all four dashboards as story points
2. Provide relevant captions to each story point in the navigation tabs
3. Create another story point to include three inferences that you will use as a narrative based on your findings to the stakeholders
4. Publish your final project workbook and copy the link to it for submission

Submission:

You will share the link to your Tableau workbook so your peers can assess your project. This assessment will be based on the clarity of your presentation, the cohesiveness of your data storytelling, and the overall impact of your data visualizations. Follow the provided instructions and project rubric to showcase your Tableau skills effectively.
